Q2

AGE NO.:	

★ Database buffer Cache

⇒ The database buffer Cache is the area in shared global area that caches the database from the recently accessed data files.

The data buffer cache can be shared among all the users who are connected.

★ The three type of buffers are:-

1. Dirty buffer:- The data here has been changed and has not yet written to the disk.

2. Free buffer:- The buffer which do not contain any data

3. pinned buffer:- The buffer which is currently been accessed.
